This information related to VCAP auditing firms is provided to the Scale Manufacturers Association for their use in supporting their members and others in complying with the VCAP policy requirements.

The main focus of VCAP is the control of the MSC's and the results of the sample testing. Satisfying these requirements increases the confidence level that production units are matching that of the performance level of the original sample submitted for evaluation. The next area of focus is the documenting of the control, testing, and test results reporting. It is important to have proper documentation to make sure the process continues correctly as people move to different positions and new people assume the responsibility of VCAP compliance.
